It seems that they are permitting Bonneville that way for now. I was surprised to get the data in that format. I can ask Mer again to make sure it is what you want. I'll look at it again and get back to you.

Thanks Heidi – appreciate the data. I can view the Bonneville scan, however, I notice it is a report for an industrial storm water permit - -is this how ODEQ is permitting Bonneville? Or is there also an individual NPDES permit for it? If there is an individual permit, could you send me the DMT data for oil and grease as you did for Hells Canyon and Oxbow? Or maybe I'm just reading the

Thanks

If you would like some rescanned from Bonneville, let me know. My apologies. I see some of the documents are upside down.

I will look at the old fact sheets again and see. I'll also look at the dmrs and get back to you.

Thanks Heidi, I'll go with that, unless there is a way to access a copy of the first permit Fact Sheet. One more favor, could you please pull some recent DMR data for oil and grease for Oxbow, Hells Canyon, and Bonneville. I thought I could be able to bolster the 10mg/l limit by indicating the ability of the dams meeting it elsewhere.

Thanks for your help

I spoke with a coworker who used to work on these permits, and who has been here a long time (**Ex. 6 Personal Privacy (PP)**). He's not sure where it comes from, but he thinks someone derived it, because it seemed reasonable. He thinks it came from the old water quality standards; it's a concentration where it begins to be seen. I know that this is limited on explanations.

Hi Dru.

My 4th was very nice. (**Ex. 6 Personal Privacy (PP)**)
Ex. 6 Personal Privacy (PP) I hope yours was good, too.

Good question. Because it was carried over from earlier permits that didn't document things well, I will have to do some investigation. I'll get back to you.

Heidi

Hello Heidi,

I hope all is well and you are enjoying the start of summer and a nice 4th of July weekend. I have a quick question regarding the oil and gas limit in your permits (10mg/l). I checked a couple of Permit Fact Sheets(Hells Canyon and Bonneville) and could not find the basis for the limit (because it appears the limits were carried over from the previous permits).

Could you let me know what the basis is for the 10mg/l. I'm considering using it in the permit I'm drafting. What I'm finding in some EPA permits

I've reviewed with oil/gas limits is the use of 15mg/l. It would seem to me I should consider downstream state water quality, but it would be useful to know what OR's rationale for 10mg/l is.

Thanks for your help
